

COVID-19 Community Report

Date: Wednesday, May 19, 2021 Time: 7:30 PM # 20-103

WHAT ARE THE SIDE EFFECTS IN CHILDREN?

After receiving a COVID-19 vaccine, adolescents may experience side effects similar to those seen in adults. They might affect your child's ability to do daily activities but should go away after a few days. Side effects are normal signs that the body is building protection.

Tiredness

Headache

Muscle pain

Fever and chills

cdc.gov/coronavirus

CS24459-A 05/19/2021

CDC recommends everyone 12 years and older should get a COVID-19 vaccination to help protect against COVID-19

- Children 12 years and older are able to get the Pfizer-BioNTech COVID-19 Vaccine
- Widespread vaccination is a critical tool to help stop the pandemic, getting your child or teen vaccinated can bring you one step closer to enjoying the activities you miss.

[Prepare for your child's vaccination visit by:](#)

- Get tips for how to support your child before, during, and after the visit.
- Talk to your child before the visit about what to expect.
- Tell the doctor or nurse about any allergies your child may have.
- Comfort your child during the appointment.
- To prevent fainting and injuries related to fainting, your child should be seated or lying down during vaccination and for 15 minutes after the vaccine is given.
- After your child's COVID-19 vaccination, you will be asked to stay for 15–30 minutes so your child can be observed in case they have a severe allergic reaction and need immediate treatment
